

JSON-LD 1.1 Mandate

- “Make JSON-LD even more like idiomatic JSON”
- Keys not Arrays
- Framing!

JSON-LD 1.1

- It's been over three years since JSON-LD 1.0 was published, and feature requests have been mounting:
 - 36 issues addressed since 1.0 (15 still open)
 - Use objects to index into collections, rather than only array form
 - Previously restricted to `@index` and `@language`. Now available on `@id` and `@type`.
 - Can include `@set` with other container types (e.g.: `"@container": ["@set", "@language"]`).
 - Framing, never complete in 1.0. Now provides ability to match on `@id`, inclusive or exclusive `@type`, property values, and specifics of a value object. Supports framing of datasets, not just graphs.
 - Contexts scoped to terms: property values or entities using a given type term can overlay terms-specific contexts.
 - Ignore some elements of JSON structure.
 - Abstract from JSON-itself, allowing for YAML, CBOR and other LD representations.
