

# JSON-LD 1.1

- It's been over three years since JSON-LD 1.0 was published, and feature requests have been mounting:
  - 36 issues addressed since 1.0 (15 still open)
  - Use objects to index into collections, rather than only array form
    - Previously restricted to `@index` and `@language`. Now available on `@id` and `@type`.
    - Can include `@set` with other container types (e.g.: `"@container": ["@set", "@language"]`).
  - Framing, never complete in 1.0. Now provides ability to match on `@id`, inclusive or exclusive `@type`, property values, and specifics of a value object. Supports framing of datasets, not just graphs.
  - Contexts scoped to terms: property values or entities using a given type term can overlay terms-specific contexts.
  - Ignore some elements of JSON structure.
  - Abstract from JSON-itself, allowing for YAML, CBOR and other LD representations.

# Version Announcement

- For backwards compatibility, version 1.1 must be specified to use new 1.1 features (may be through API).

```
{
  "@context": {
    "@version": 1.1,
    "schema": "http://schema.org/",
    "name": "schema:name",
    "body": "schema:articleBody",
    "words": "schema:wordCount",
    "post": {
      "@id": "schema:blogPost",
      "@container": "@id"
    }
  },
  "@id": "http://example.com/",
  "@type": "schema:Blog",
  "name": "World Financial News",
  ...
}
```
