Scoped Contexts (@type)

Improve Compact IRIs

- Previously, when compacting, compact IRIs could be created that were not intended.
 - E.g., defining a term "sport" could cause the creation of a term "sport:sEvent", where "schema:sportsEvent" was intended.
 - Now, terms only used for creating Compact IRIs if the term ends with a ":" or the value of the term is an IRI ending with "/" or "#".
