JSON-LD 1.1

- It's been over three years since JSON-LD 1.0 was published, and feature requests have been mounting:
 - 36 issues addressed since 1.0 (15 still open)
 - Use objects to index into collections, rather than only array form
 - Previously restricted to @index and @language. Now available on @id and @type.
 - Can include @set with other container types (e.g.: "@container": ["@set", "@language"]).
 - Framing, never complete in 1.0. Now provides ability to match on @id, inclusive or exclusive @type, property values, and specifics of a value object. Supports framing of datasets, not just graphs.
 - Contexts scoped to terms: property values or entities using a given type term can overlay terms-specific contexts.
 - Ignore some elements of JSON structure.
 - Abstract from JSON-itself, allowing for <u>YAML</u>, <u>CBOR</u> and other LD representations.

Version Announcement

 For backwards compatibility, version 1.1 must be specified to use new 1.1 features (may be through API).
